

SECTOR

Bitcoin mining

We source and quote the electrical gear a mining site buys for itself: transformers new, refurbished and surplus, from one unit to project quantities, and the switchgear, generators, parts, fluids and cable that keep the site running.

Transformers

- Power transformers
- Pad-mount transformers
- Distribution transformers

New, refurbished and surplus units, from one unit to project quantities. A new large power transformer can be a multi-year wait, so send the specification and we search manufacturers and second sources for the unit and for alternates, then quote what we find.

Switchgear and components

- Switchgear
- Fuses and fuseholders
- In-line disconnects

Generators

- Generators
- Generator packages

Transformer parts

- Bushings
- Valves
- Arresters
- Gaskets
- Gauges and relays

The parts that keep an installed transformer running.

Transformer fluids

- Type II mineral oil
- Natural ester fluid

Power cable and building wire

- Power cable
- Building wire

HOW A REQUEST WORKS HERE

Send the bill of materials. A bill of materials, part numbers or drawings, with quantity and the date the site needs it. For a single part, a nameplate photo is enough.

We search. Manufacturer first, then distributors and second sources, and for a transformer the refurbished and surplus market alongside new.

Quote in writing. Pricing and lead time in one written quote.

Deliver to the site. Freight coordinated to the pad or the laydown yard, tracked until it lands.
